ABSTRACT

The Cricket Training Management System is a database-based system designed to manage and organize the activities of a cricket training academy. The system provides a centralized platform for maintaining information related to cricketers, trainers, training programs, applications, schedules, fees, payments, and equipment.

The system reduces the difficulties associated with manual record keeping by maintaining information in a structured relational database. Different users can perform operations according to their respective roles.

The project demonstrates important Database Management System concepts including relational tables, primary keys, foreign keys, constraints, DDL commands, SQL queries, PL/SQL procedures, functions, and triggers.

The proposed system improves data organization, accessibility, consistency, and efficiency in managing cricket training activities.

CHAPTER 1 INTRODUCTION

1.1 Background

Cricket training academies need to maintain information related to cricketers, trainers, training programs, schedules, fees, payments, and equipment. Managing such information manually can be difficult and time-consuming.

The Cricket Training Management System provides a centralized approach for storing and managing this information using a relational database.

1.2 Overview

The system allows authorized users to manage cricketer information, trainer information, training programs, applications, schedules, fees, payments, and equipment.

The database establishes relationships between the different entities involved in cricket training.

1.3 Scope

The scope of the project includes:

- Cricketer management
- Trainer management
- Training program management
- Training application management
- Training schedule management
- Fee management
- Payment management
- Equipment management
- Training session management

CHAPTER 2 PROBLEM STATEMENT & OBJECTIVES

2.1 Problem Statement

Managing cricket training activities using manual records can lead to data duplication, difficulty in retrieving information, and errors in maintaining player, trainer, training, payment, and equipment records.

Therefore, a centralized database management system is required to efficiently store, organize, retrieve, and manage information related to cricket training activities.

2.2 Objectives

The main objectives of the system are:

1. To develop a centralized database for cricket training management.
2. To manage cricketer information.
3. To manage trainer information.
4. To manage training programs.
5. To manage training applications.
6. To maintain training schedules.
7. To manage fees and payments.
8. To maintain cricket equipment information.
9. To reduce manual work and data redundancy.
10. To maintain data integrity using database constraints.
11. To demonstrate SQL and PL/SQL concepts.

CHAPTER 3 FUNCTIONAL REQUIREMENTS

3.1 System Users

The Cricket Training Management System consists of the following users:

- Super Admin
- System User
- Trainer
- Cricketer

3.2 System Modules

The Cricket Training Management System is divided into four major modules. Each module is responsible for managing a specific set of activities within the system.

Table 3.1: System Modules

Module	**Module Name**	**Tables**
Module 1	Authentication & User Management	USER, CRICKETER, TRAINER
Module 2	Training Management	CRICKET_PROGRAM, TRAINING_APPLICATION, TRAINING_SESSION, VENUE
Module 3	Finance & Equipment	FEE, PAYMENT, EQUIPMENT, EQUIPMENT_ISSUE
Module 4	Attendance & Participation	PARTICIPATION

3.3 Software Requirements

The software used for the development and implementation of the system includes:

- Oracle Database

- Oracle SQL Developer
- SQL
- PL/SQL
- Windows
- Web Browser

3.4 Hardware Requirements

The minimum hardware requirements are:

- Intel Core i3 processor or equivalent
- Minimum 4 GB RAM
- Minimum 10 GB available storage
- Keyboard and mouse
- Monitor
